THE DIFFERENCE OF TECHNOLOGY WORKING WITH YOU, NOT AGAINST YOU

BD CAN HELP YOU GET YOUR MEDICATION MANAGEMENT TECHNOLOGIES ON THE SAME PAGE, AND YOUR TEAM DOING WHAT MATTERS MOST. At BD, we know medication management is incredibly complex. Aligning people, technologies and systems to get a single medication safely to a patient is daunting. But there's a better way, one that enables IT professionals to get all the players, parts and processes on the same page. At the heart of it is the BD HealthSight™ Platform, our integrated approach that connects our medication management solutions with each other—and with the EMR. The result? Improved efficiency and greater visibility across your enterprise, so your clinicians can get back to what matters most: your patients. Discover medication management that takes less management. **Discover BD.**

Learn how to overcome medication management obstacles from operational experts in a virtual event series focused on driving patient-centered care through connectivity: bd.com/hcp21srx

SPRING CONFERENCE

Live! ONLINE

David Mason

This time last year, we would not have dreamed that we would be holding our 2021 spring conferences online—in fact, we didn't even have the capabilities to do so. The past 12 months have been unprecedented for all of us. Our hearts continue to go out to everyone directly and indirectly impacted by COVID-19. We would also like to acknowledge our amazing healthcare workers and first responders who are participating with us in our live online conference. What you have done and continue to do is exceptional—you are the true heroes of this crisis.

For the past 15 years, Health Connect Partners has been focused on our mission of bringing providers and suppliers together, and each of you have been a part of our journey. The lasting friendships and meaningful connections made at our events have forged us into a strong community. While we hate that it's been more than a year since we've held an in-person event, we are grateful to be able to provide each of you, our loyal providers and suppliers, an avenue to safely connect live online until we can all be back in the same physical location together.

Nelson Hendry

We are delighted to welcome you—this time for our 2021 Spring Hospital Pharmacy Conference—Live Online! We realize that the need for connection in our healthcare communities has never been greater, even though meeting together in person is still not possible yet. We look forward to bringing you this opportunity, which will allow you to connect face-to-face (live online), develop business relationships, be inspired by thought-provoking education, and discover new technologies and products.

If you have questions at any time during this event, stop by the help desk or call us at 615-449-6234. Our team is here for you and happy to help.

We are beyond grateful to all of you for your understanding and willingness to keep moving in a positive direction. We look forward to hosting you for this wonderful live online event.

David, Nelson and Jason

Jason Green

Special thanks to BD, our title sponsor, for their support of this unparalleled event.

S VIRTUAL suppliershowcase*

OPEN DURING THE ENTIRE CONFERENCE

Health Connect Partners' Virtual Supplier Showcase provides a format for hospital decision makers to research, learn about, and connect with suppliers in a unique virtual space. Each virtual booth features the supplier organization and highlights their solutions, products, and technologies. This new platform is designed to give hospital providers and supplier organizations the ability to directly interact in a customized environment.

In addition to providing the platform, Health Connect Partners is focused on driving high-quality traffic to each Virtual Supplier Showcase booth—just like we do during our in-person Supplier Showcase events. The Virtual Supplier Showcase is open for visits any time during the conference dates and is a required stop on the way to the educational sessions. Each provider executive will be encouraged to participate in a fun, interactive virtual experience allowing them to learn and request information along their journey through the Virtual Supplier Showcase.

Best of all—the Virtual Supplier Showcase platform allows provider executives to directly request information, and schedule meetings with suppliers through our live online meeting platform. Providers have a choice of requesting a meeting during the Live Online Reverse Expo or selecting a specific date and time for an on-demand meeting outside of the Live Online Reverse Expo times.

CE CREDIT DETAILS

All educational sessions will be released at 8:00am Central on Monday, April 12th.

Please be aware that if you want to obtain LIVE CE credit for a session, you must watch the session AND participate in a Live Q&A at either 11:00am Central or at 5:00pm Central on the date specified for each session. Live Q&As are not available on-demand. If you do not participate in the Live Q&A and also watch the session, you will only be eligible to receive Enduring CE credit for each session you view.

Each session will be available for on-demand viewing (and Enduring CE) until Friday, May 21st, but please keep in mind that we cannot provide Live CE credit unless you watched the session and participated in the Live Q&A for that session. Live Q&As will be available for Sessions 2-8.

Your CE credit will be posted to your CPE Monitor account by June 4th.

ONE

keynote address

Live Inspired

John O'Leary

In 1987, John O'Leary was a curious nine-year-old boy. Playing with fire and gasoline, John created a massive explosion in his home and was burned on 100% of his body. He was given less than a 1% chance to live.

This epic story of survival was first showcased in his parents' book, *Overwhelming Odds*, in 2006. Originally printing 200 copies for friends and family, his parents have sold 60,000+ copies. It was this book that first invited John to embrace his miraculous recovery and share it with the world.

John inspires 50,000+ people at 100+ events each year. He speaks to companies and organizations across industries, such as: sales, healthcare, safety, marketing, finance, faith, education and insurance.

Consistently described as "the best speaker we've ever had," John receives nearly 100% of his engagements from referrals. His schedule is a testament to the power of his message and who he is as an individual.

His emotional story-telling, unexpected humor and authenticity make each of his presentations truly transformational.

John is a two-time #1 National Bestselling author. His first book *ON FIRE: The 7 Choices to Ignite a Radically Inspired Life* has sold 250,000+ copies and been translated into 12 languages. *IN AWE: Rediscover Your Childlike Wonder to Unleash Inspiration, Meaning and Joy* published in May 2020 with many saying it is the message we all need right now.

John's award-winning *Live Inspired* Podcast has more than 2.5 million downloads and enjoys world-class guests like Brené Brown, Mitch Albom and Shawn Achor.

John considers his greatest success to be his marriage to his wife Beth, their four children and his relationships with friends and family.

learning objectives

After attending this presentation, attendees will be able to:

- Identify how changing the way they ask questions transforms the answers they receive – and the lives they lead
- Improve personal accountability for actions, attitudes and outcomes
- Better understand their impact within their team and re-ignite their passion for their profession

Live Q&A

Tuesday, April 13th 11:00am–11:15am CT & 5:00pm–5:15pm CT

**2021 State of the Union:
The Resilient
Healthcare System**

Ford Koles, Jr.

Bradford (Ford) is one of Advisory Board's preeminent thought leaders in the area of health system economics and strategy, and is the keynote speaker at the annual meetings for Advisory Board's strategy membership. He also leads the faculty for the company's Chief Executive Officer meeting series each year. Ford is a health care economist by training and has participated in every major Advisory Board research initiative since 1992. He is well-versed in healthcare history and the many reform initiatives we have lived through in the past three decades: coverage expansion; vertical integration and physician partnership models; managed care and

payer contracting; horizontal integration and system economies of scale; and quality-based payment.

Prior to joining Advisory Board, he worked as a management consultant for both the Hay Group and Ernst & Young.

Ford received his BA from Kenyon College, and his MA in Economics from John Hopkins University.

learning objectives

After attending this presentation, attendees will learn:

- *How healthcare purchasers and policymakers are shifting their strategies as a result of Covid-19*
- *How the pandemic is likely to impact provider consolidation and site-of-care shifts*
- *How the delivery system will need to shift operating models to enable greater resilience in the future*

503As and The FDA: Understanding Sterile Compounding Laws and Policies

Katrina K. Harper, PharmD, MBA, BCPS, BCSCP, DPLA

Katrina K. Harper has more than 20 years of healthcare experience in several clinical and leadership roles. She is currently the Director of Pharmacy Services for AIS Healthcare's Ophthalmic Division. Prior to joining AIS Ophthalmics, she was the Clinical Pharmacy Director for the nation's largest member-driven, health care performance improvement company where she served as a subject matter expert in the areas of drug compounding, medication safety, regulations, quality, and compliance. Her previous experiences include being a Pharmacy Manager for a community pharmacy chain, Director of Pharmacy of a cardiovascular specialty hospital, and Medication Safety Officer for a safety-net

academic county hospital. She has served as chairperson and adjunct faculty for an ASHP-accredited Pharmacy Technician program at a community college. Katrina is also a recipient of the Texas Society of Health-Systems Pharmacist's Larry C. Nesmith Pharmacist Recognition Award. She holds a Doctorate of Pharmacy degree from Xavier University of Louisiana College of Pharmacy and a Master's degree in Business Administration from the University of Texas at Arlington College of Business Administration. She is also a Board Certified Pharmacotherapy Specialist, a Board Certified Sterile Compounding Pharmacist and holds numerous other certifications.

learning objectives

After attending this presentation, attendees will learn to:

- Summarize FDA's oversight of traditional compounding pharmacies according to Section 503A of the Federal Food, Drug, and Cosmetic (FD&C) Act
- Describe Insanitary Conditions at Compounding Facilities as defined by the FDA
- Summarize the FDA's policy on Compounding Drugs Using Bulk Drug Substances under Section 503A of the FD&C Act
- List interim guidance for industry by the FDA that may impact pharmacy practice

FOUR

Live Q&A

Thursday, April 15th 11:00am–11:15am CT & 5:00pm–5:15pm CT

Confronting and Overcoming Bias in the Healthcare Industry

Luther Wright, Jr. J.D., B.S.

Luther Wright, Jr. began his career with a general practice firm in the litigation section. He spent the first several years of his legal career practicing in the general litigation area before joining the Labor & Employment team. He has significant experience in the areas of labor and employment law, corporate business litigation and complex litigation, including class action and collective action lawsuits. He typically represents management in all forms of employment discrimination litigation, including litigation based on federal anti-discrimination statutes, state statutes and common law, violence in the workplace, Fair Labor Standards Act claims and independent contractor disputes. Luther is a member of Ogletree's Diversity and Inclusion Action Team that provides timely client advice and guidance on diversity related matters. Luther also devotes a significant amount of his practice to day-to-day client advice, general supervisor/employee training, training and advising on

diversity and inclusion issues and workplace violence issues, and also acts as the Assistant Director of Client Training as part of the Ogletree Deakins Learning Solutions ("ODLS") team. ODLS provides employee and supervisor training in a variety of formats, including in-person training, training by webinar/webcasts and customized video training products.

Luther has experience representing banks, national gaming companies, automotive companies, government contractors, hospitals, restaurants, retail establishments, closely held businesses and entertainment companies in employment and business litigation. He has represented clients in litigation based on federal and state anti-discrimination laws, state tort litigation, personal injury matters involving commercial vehicles, claims under the Equal Credit Opportunity Act, class action and multi-plaintiff litigation.

learning objectives

After attending this presentation, attendees will learn to:

- *Reveal unconscious biases*
- *Interrupt unconscious biases*
- *Address the issue of Microaggressions*
- *Develop strategies for improving cross-cultural communication and relationships organizationally and individually*

Connect MORE Patients with the Rx Discounts They Need Now

Improve Outcomes, Rx Fills, & Patient Satisfaction!

Patients are prescribed medication

Our software finds matching mfg. discounts

Coupons are included in discharge papers

More patients fill and follow prescriptions

ADHERENCE IS A SERIOUS PROBLEM

If patients don't take medications as prescribed, treatment will fail— *and providers are still accountable.*

Affordability is a leading cause of non-adherence.

TYPICAL DISCOUNTS ARE UNDER-UTILIZED

While prescription discounts seem readily available, most patients don't take advantage of them.

Staff often hunt down these offers for patients.

AUTOMATION IS THE KEY

No change to workflows. No impact on prescribing patterns. Effortless discounts (that pharma pays for) are simply provided to all qualified patients.

These days, every dollar counts.

Patient Savings Estimate

(medium-sized health system)

Inpatient discharges	114,468
ED visits	515,434
Outpatient visits	2,044,824
Private insurance	49%
Generic meds	92%
Avg. Rx per visit	2
Discounts delivered	104,849
Avg. savings per discount	\$111.51
Annual patient savings	\$14,029,651

FDA Updates on 503B Compounding Policy and Quality

Co-presenter

Hidee L. Molina, MS.

CDR Hidee Molina is a U.S. Public Health Service Commissioned Corps officer currently serving as the Branch Chief (acting) for Branch 1 within the Division of Compounding Quality (DCI), Office of Compounding Quality and Compliance (OCQC) in FDA's Office of Compliance. As a recognized authority in scientific and regulatory matters associated with pharmacy compounding, Molina oversees pharmacy compounding program's efforts to protect the American public from poor quality drug products and ensure compliance of firms with sections 503A and 503B of the Federal Food, Drug and Cosmetic Act (FDCA). CDR Molina is a subject matter expert on sterile drug production and Current Good Manufacturing Practices (21 CFR 210 & 211).

She began her service with FDA in 2008 at the Office of Compliance in CDER as a compliance officer, where she evaluated regulatory compliance and generates enforcement actions of traditional human drug manufacturers. Prior to joining FDA, she worked for 7 years as a quality compliance specialist in several leading biotech drug manufacturing companies. She holds a BS and MS in Chemistry.

learning objectives

After attending this presentation, attendees will learn to:

- Recognize the statutory framework and requirements for 503B compounding
- Understand FDA's work on policy for hospitals and health system compounding
- Understand importance of quality as it relates to 503B compounding
- Understand 483s and responses

FIVE

Co-presenter

Kemi Asante, PharmD, MPH, RAC

CDR Kemi Asante, PharmD, MPH, RAC is a U.S. Public Health Service Commissioned Corps officer currently serving as a Consumer Safety Officer (CSO) in FDA's Office of Compliance (OC), Office of Compounding Quality and Compliance (OCQC), Division of Compounding Policy and Outreach (DCPO). In this role, CDR Asante serves as a recognized authority in scientific and regulatory matters associated with pharmacy compounding. She develops and implements policies and compliance strategies to protect the public health by helping assure the quality of compounded drugs. She also evaluates bulk drug substances that have been nominated for use in compounding to determine eligibility for inclusion on FDA's Bulks List.

Prior to her current role, CDR Asante served as a CSO in OC's Office of Unapproved Drugs and Labeling Compliance (OUDLC) where she served as principal scientific

advisor for case development, compliance strategies, and regulatory actions related to the inspection of compounding pharmacies nationwide. Prior to joining FDA, CDR Asante worked as a Clinical Pharmacist at the Johns Hopkins Hospital Inpatient Critical Care Pharmacy, MedStar Home Infusion Services and Bravo Health.

CDR Asante received her Doctorate in Pharmacy from Howard University, and Master of Public Health and Graduate Certificate in Global Health from UMass Amherst. She earned her Regulatory Affairs Certification (RAC) from the Regulatory Affairs Professionals Society and U.S. Healthcare Compliance Certification from Seton Hall Law School. CDR Asante currently resides in Maryland with her husband and two beautiful daughters. She enjoys interior designing, loves to travel and appreciates the diverse cultures of the world.

Co-presenter

Alexandria Fujisaki, JD

Alexandria Fujisaki has worked as a Regulatory Counsel for the U.S. Food and Drug Administration (FDA) for eight years. During this time, Alexandria has focused on government contracts, tobacco products, and compounded human drug products. Currently, Alexandria leads several policy and legal initiatives on human drug compounding for the Office of Compliance within FDA's Center for Drug Evaluation and Research. Prior to joining FDA, Alexandria worked for the Rhode Island Office of the Attorney General where she focused on health law projects including hospital mergers and the Tobacco Master Settlement Agreement. Alexandria holds a Juris Doctor from the Catholic University of America Columbus School of Law.

Enjoy Health Connect Partners Virtual Pharmacy Conference!

New from Kit Check

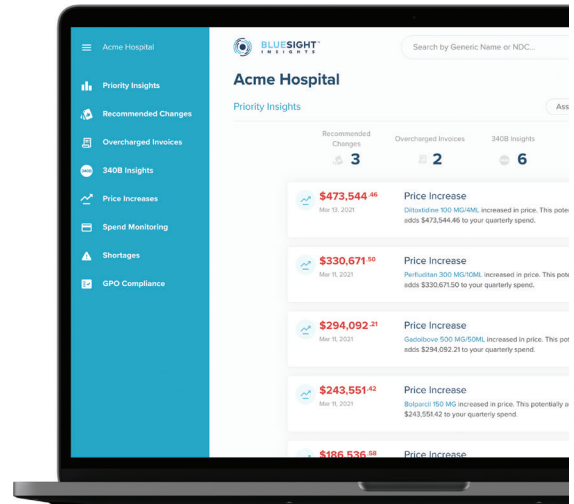

Is your organization paying the best price for each medication it purchases? With so many options available, manual comparison for each drug presentation is overwhelming.

Bluesight Insights utilizes innovative technology for optimized supply chain management, helping hospitals and health systems manage and stock pharmacy inventory with ease by providing real-time insights into drug pricing, GPO compliance and 340B optimization.

The end results are substantial hard dollar drug savings recognized from the start.

Subscribe to Savings

Save six to seven figures (1-3%) on your drug spend.

Recommended Changes

Be notified in real-time whenever a new better-priced item enters the market, or if a competitor lowers their pricing.

Price Increases

Prices can and do change on a daily basis. You can now see whenever a price changes, and see historical pricing over time.

Overcharged Invoices

You should be paying the same price across similar account types. Contract and pricing errors are all too common and easily missed. You now have a way to quickly identify these errors and get them corrected.

Spend Monitoring

Is your team buying the correct, most cost-effective items? Now you can monitor Pharmacy purchasing behavior to reduce overspending.

GPO Compliance

Group Purchasing Organizations (GPO) help healthcare providers save money on products and services. Bluesight Insights monitors overall GPO compliance and helps increase Failure-to-supply (FTS) refunds from manufacturers.

Shortage Management

Shortages abound in today's pharmaceutical market. Bluesight Insights delivers the most up-to-date shortage information so you and your team can quickly respond to the ever-changing market.

340B Insights

You can now see when you have an increase in spending due to a change in your 340B ratio per medication. Whenever spend increases you will now be notified of the potential problem.

Come visit the Kit Check virtual booth - and learn more at the all new [KitCheck.com](https://www.kitcheck.com)

FERAHEME® provides established efficacy and safety profile, flexible scheduling

Administration¹:

- Feraheme only requires 2 infusions limiting the number of visits
- No pre-treatment or test dose is required

Dosing¹:

- Feraheme infusions can be dosed as early as 3 days apart, allowing for a complete course of therapy in less than a week

Management of materials¹:

- Feraheme can be mixed with 0.9% NaCl (normal saline) or 5% dextrose
- Feraheme can be diluted in a range of volumes from 50 – 200mL
- Once diluted, Feraheme can be stored at room temperature for up to 4 hours or refrigerated for up to 48 hours
- Many of AMAG's commercial supply chain partners are located within North America, and we currently have adequate stock of all our products

FERAHEME Delivers 1 Gram of Iron in Just 2 Infusions as early as 3 days apart

Flexible scheduling gives your patients the freedom to receive the iron they need as early as 3 days

FERAHEME® (ferumoxytol injection), for intravenous use Brief Summary:
Consult the package insert for complete prescribing information.

WARNING: RISK FOR SERIOUS HYPERSENSITIVITY/ ANAPHYLAXIS REACTIONS

Fatal and serious hypersensitivity reactions including anaphylaxis have occurred in patients receiving Feraheme. Initial symptoms may include hypotension, syncope, unresponsiveness, cardiac/cardiopulmonary arrest.

- Only administer Feraheme as an intravenous infusion over at least 15 minutes and only when personnel and therapies are immediately available for the treatment of anaphylaxis and other hypersensitivity reactions.
- Observe for signs or symptoms of hypersensitivity reactions during and for at least 30 minutes following Feraheme infusion including monitoring of blood pressure and pulse during and after Feraheme administration.
- Hypersensitivity reactions have occurred in patients in whom a previous Feraheme dose was tolerated.

INDICATIONS AND USAGE: Feraheme is indicated for the treatment of iron deficiency anemia (IDA) in adult patients who have intolerance to oral iron or have had unsatisfactory response to oral iron, or who have chronic kidney disease (CKD).

CONTRAINDICATIONS: Feraheme is contraindicated in patients with known hypersensitivity to Feraheme or any of its components or have a history of allergic reaction to any intravenous iron product.

WARNINGS AND PRECAUTIONS, Serious Hypersensitivity Reactions: Fatal and serious hypersensitivity reactions including anaphylaxis, presenting with cardiac/cardiopulmonary arrest, clinically significant hypotension, syncope, or unresponsiveness have occurred in patients receiving Feraheme. Other adverse reactions potentially associated with hypersensitivity have occurred (pruritus, rash, urticaria, and wheezing). These reactions have occurred following the first dose or subsequent doses in patients in whom a previous Feraheme dose was tolerated.

Patients with a history of multiple drug allergies may have a greater risk of anaphylaxis with parenteral iron products. Carefully consider the potential risks and benefits before administering Feraheme to these patients.

Only administer Feraheme as an intravenous infusion over at least 15 minutes and only when personnel and therapies are immediately available for the treatment of anaphylaxis and other hypersensitivity reactions. Closely observe patients for signs and symptoms of hypersensitivity including monitoring of blood pressure and pulse during and after Feraheme administration for at least 30 minutes and until clinically stable following completion of each infusion.

In a clinical study in patients with IDA, regardless of etiology, hypersensitivity reactions were reported in 0.4% (4/997) of subjects receiving Feraheme administered as intravenous infusion over at least 15 minutes. These included one patient with severe hypersensitivity reaction and three patients with moderate hypersensitivity reactions.

In clinical studies predominantly in patients with IDA and CKD, serious hypersensitivity reactions were reported in 0.2% (4/1,806) of subjects receiving Feraheme (administered as a rapid intravenous injection – prior method of administration no longer approved). Other adverse reactions potentially associated with hypersensitivity (e.g., pruritus, rash, urticaria or wheezing) were reported in 3.5% (63/1,806) of these subjects.

In the post-marketing experience, fatal and serious anaphylactic type reactions presenting with cardiac/cardiopulmonary arrest, clinically significant hypotension, syncope, and unresponsiveness have been reported. Elderly patients with multiple or serious co-morbidities who experience hypersensitivity reactions and/or hypotension following administration of Feraheme may have more severe outcomes.

Hypotension: Feraheme may cause clinically significant hypotension.

In a clinical study with Feraheme in patients with IDA, regardless of etiology, moderate hypotension was reported in 0.2% (2/997) of subjects receiving Feraheme administered as intravenous infusion over at least 15 minutes.

In clinical studies in patients with IDA and CKD, hypotension was reported in 1.9% (35/1,806) of subjects, including three patients with serious hypotensive reactions, who had received Feraheme as a rapid intravenous injection (prior method of administration no longer approved).

Hypotension has also been reported in the post-marketing experience. Monitor patients for signs and symptoms of hypotension following each Feraheme administration.

Iron Overload: Excessive therapy with parenteral iron can lead to excess storage of iron with the possibility of iatrogenic hemosiderosis. Regularly monitor the hematologic response during parenteral iron therapy. Do not administer Feraheme to patients with iron overload. In the 24 hours following administration of Feraheme, laboratory assays may overestimate serum iron and transferrin bound iron by also measuring the iron in the Feraheme complex.

Magnetic Resonance (MR) Imaging Test Interference: Administration of Feraheme may transiently affect the diagnostic ability of MR imaging. Conduct anticipated MR imaging studies prior to the administration of Feraheme. Alteration of MR imaging studies may persist for up to 3 months following the last Feraheme dose. If MR imaging is required within 3 months after Feraheme administration, use T1- or proton density-weighted MR pulse sequences to minimize the Feraheme effects; MR imaging using T2-weighted pulse sequences should not be performed earlier than 4 weeks after the administration of Feraheme. Maximum alteration of vascular MR imaging is anticipated to be evident for 1 – 2 days following Feraheme administration.

Feraheme will not interfere with X-ray, computed tomography (CT), positron emission tomography (PET), single photon emission computed tomography (SPECT), ultrasound or nuclear medicine imaging.

ADVERSE REACTIONS: The following serious adverse reactions are described elsewhere in the labeling: Serious Hypersensitivity Reactions, Hypotension, Iron Overload, Magnetic Resonance (MR) Imaging Test Interference.

Clinical Trial Experience: Because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a drug cannot be directly compared to rates in the clinical trials of another drug and may not reflect the rates observed in practice.

In clinical studies, 3,968 subjects were exposed to Feraheme. Of these subjects 31% were male and the median age was 54 years (range of 18 to 96 years).

The data described below reflect exposure to Feraheme in 997 patients exposed to a 1.02 g course of ferumoxytol administered as two 510 mg intravenous (IV) doses: 992 subjects (99.5%) received at least 1 complete dose of ferumoxytol and 946 subjects (94.9%) received 2 complete doses. The mean cumulative IV iron exposure was 993.80 ± 119.085 mg.

The safety of Feraheme was studied in a randomized, multicenter, double-blind clinical trial in patients with IDA (IDA Trial 3). In this trial, patients were randomized to two intravenous infusions of 510 mg (1.02 g) of Feraheme (n=997), or two intravenous infusions of 750 mg (1.500 g) of ferric carboxymaltose (FCM) (n=1000). Both intravenous infusions were infused over a period of at least 15 minutes. Most patients received their second infusion of Feraheme and FCM 7(±1) days after Dose 1.

The mean (SD) age of the study population (N=1997) was 55.2 (17.16) years. The majority of patients were female (76.1%), white (71.4%) and non-Hispanic (81.8%). The mean (SD) hemoglobin at baseline for all patients was 10.4 (1.5) g/dL.

Serious adverse events were reported in 3.6% (71/1997) of ferumoxytol- and FCM-treated patients. The most common (≥2 subjects) serious AEs reported in Feraheme-treated patients were syncope, gastroenteritis, seizure, pneumonia, hemorrhagic anemia, and acute kidney injury. In FCM-treated patients the most common (≥2 subjects) serious AEs were syncope, cardiac failure congestive, angina pectoris, and atrial fibrillation.

Adverse reactions related to Feraheme and reported by ≥ 1% of Feraheme-treated patients in IDA Trial 3 following administration of Feraheme 2 x 510 mg (N=997)

or ferric carboxymaltose 2 x 750 mg (N=1000) were headache (3.4% Feraheme, 3.1% ferric carboxymaltose), nausea (1.8, 3.4), dizziness (1.5, 1.6), fatigue (1.5, 1.2), diarrhea (1, 0.8), and back pain (1, 0.4).

In IDA Trial 3, adverse reactions leading to treatment discontinuation and occurring in ≥ 2 Feraheme-treated patients included arthralgia (0.3%), dyspnea (0.3%), flushing (0.2%), chest discomfort (0.2%), chest pain (0.2%), nausea (0.2%), back pain (0.2%), dizziness (0.2%) and headache (0.2%).

Across two clinical trials in patients with IDA (IDA Trial 1 and 2), patients were randomized to: two injections (rapid intravenous injection - prior method of administration no longer approved) of 510 mg of Feraheme (n=1,014), placebo (n=200), or five injections/infusions of 200 mg of iron sucrose (n=199). Most patients received their second Feraheme injection 3 to 8 days after the first injection. Adverse reactions related to Feraheme and reported by ≥ 1% of Feraheme-treated patients in these trials were similar to those seen in Trial 3.

In Trials 1 and 2, adverse reactions leading to treatment discontinuation and occurring in ≥ 2 Feraheme-treated patients included hypersensitivity (0.6%), hypotension (0.3%), and rash (0.2%).

In addition, a total of 634 subjects enrolled in and completed participation in a Phase 3 open label extension study. Of these, 337 subjects met IDA treatment criteria and received Feraheme. Adverse reactions following this repeat Feraheme dosing were generally similar in type and frequency to those observed after the first two intravenous injections.

Across three randomized clinical trials in patients with IDA and CKD (CKD Trials 1, 2, and 3), a total of 605 patients were exposed to two injections of 510 mg of Feraheme and a total of 280 patients were exposed to 200 mg/day of oral iron for 21 days. Most patients received their second Feraheme injection 3 to 8 days after the first injection.

Adverse reactions related to Feraheme and reported by ≥ 1% of Feraheme-treated patients in the CKD randomized clinical trials following administration of Feraheme 2 x 510 mg (n=605) or oral iron (n=280) were nausea (3.1% Feraheme, 7.5% oral iron), dizziness (2.6, 1.8), hypotension (2.5, 0.4), peripheral edema (2, 3.2), headache (1.8, 2.1), edema (1.5, 1.4), vomiting (1.5, 5), abdominal pain (1.3, 1.4), chest pain (1.3, 0.7), cough (1.3, 1.4), pruritus (1.2, 0.4), pyrexia (1, 0.7), back pain (1, 0), muscle spasms (1, 1.4), dyspnea (1, 1.1), and rash (1, 0.4). Diarrhea (4%), constipation (2.1%) and hypertension (1%) have also been reported in Feraheme-treated patients.

In these clinical trials in patients with IDA and CKD, adverse reactions leading to treatment discontinuation and occurring in ≥ 2 Feraheme-treated patients included hypotension (0.4%), chest pain (0.3%), and dizziness (0.3%).

Following completion of the controlled phase of the trials, 69 patients received two additional 510 mg intravenous injections of Feraheme (for a total cumulative dose of 2.04 g). Adverse reactions following this repeat Feraheme dosing were similar in character and frequency to those observed following the first two intravenous injections.

Postmarketing Experience: Because adverse reactions are reported voluntarily from a population of uncertain size, it is not always possible to reliably estimate their frequency or establish a causal relationship to drug exposure.

The following serious adverse reactions have been reported from the post-marketing experience with Feraheme: fatal, life-threatening, and serious anaphylactic-type reactions, cardiac/cardiopulmonary arrest, clinically significant hypotension, syncope, unresponsiveness, loss of consciousness, tachycardia/rhythm abnormalities, angioedema, ischemic myocardial events, congestive heart failure, pulse absent, and cyanosis. These adverse reactions have usually occurred within 30 minutes after the administration of Feraheme. Reactions have occurred following the first dose or subsequent doses of Feraheme.

See full Prescribing Information for Feraheme available at www.feraheme.com.

Live Q&A

Tuesday, April 20th 11:00am–11:15am CT & 5:00pm–5:15pm CT

Not everything is Covid-19: The History and Future for Prevention and Treatment of RSV and other similar Lower Respiratory Tract Viral Diseases

learning objectives

After attending this presentation, attendees will learn to:

- Distinguish the difference in symptoms of Covid-19 and other respiratory disease symptoms
- Distinguish the differences between Upper and Lower Respiratory tract diseases
- Discuss the role of monoclonal antibodies in the prevention and treatment of LRTI
- Discuss the role of immune globulins in the prevention and treatment of LRTI
- Discuss the past, present and future state of vaccines in the prevention of RSV
- Discuss the impact of high-risk populations on the prevention strategies for LRTI

Jerry Siegel, Pharm.D., FASHP

Jerry Siegel retired in 2009 as the Senior Director for Pharmaceutical Services for the Ohio State University Medical Center and Assistant Dean for the Ohio State University College of Pharmacy. He is still a clinical associate professor at the College of Pharmacy. He graduated from the Ohio State University with his B.S. in microbiology and B.S. and Pharm.D. from the College of Pharmacy. Previously a clinical microbiologist, he worked as a clinical pharmacist in transplantation and hematology/oncology before focusing on administration. He has had over 100 invited presentations and publications in the area of immunology and infectious disease. In 1995 he received the designation of Fellow of the American Society of Health-System Pharmacists. Dr. Siegel is the recipient of the 2011 American Society of Health System Pharmacists "Distinguished Leadership Award". Currently he is Vice President and managing partner of Safe Medication Management Associates Inc. (SMMA) consulting firm.

In 2014, Dr. Siegel was part of the team that received the ASHP/Cardinal National Safety Award and \$50,000 grant at the ASHP midyear clinical meeting for the project at the Yale-New Haven Hospital on Telepharmacy. Dr. Siegel's focus recently has been designing and building pharmacy infusion centers and assuring and training staff compliance with USP <797> and <800> chapters. He has also provided lectures on the use of IVIG and Rabies immune globulin throughout the United States at state and local pharmacy associations.

Most recently Dr. Siegel has been providing Covid-19 vaccinations at long term care facilities throughout Ohio as he is an APhA certified immunizer.

Tackling Opioid Abuse in a Post-Pandemic Environment: Leveraging Artificial Intelligence to Identify the Pre-Diagnosed "Silent Majority"

Dr Gidi Stein

Dr. Gidi Stein is an award-winning physician, researcher, technologist and an expert in medical informatics. Early in his career, he served as CTO and Chief Architect of several algorithm-rich startup companies in Israel. He uses his in-depth knowledge of these fields, researching the application of AI on electronic health records for practical clinical use at Tel Aviv University, where he is also a faculty member, teaching clinical medicine.

Dr. Stein received a PhD in Computational Biology from Tel Aviv University, the research for which focused on using computational methods on large-scale biological data for better prognostication of breast cancer patients.

Dr. Stein has also published several data-driven manuscripts on cardiovascular topics such as heart failure, type-II myocardial infarction, and the relevance of elevated troponin levels in an inpatient setting.

Dr. Stein is also a part-time senior physician at Meir Hospital, Israel, and CEO & Co-Founder of MedAware, which utilizes AI-driven outlier detection technology to mitigate medication-related risks and evolving adverse drug events.

learning objectives

After attending this presentation, attendees will learn:

- The impact of COVID-19 on opioid dependency, overdose and mortality
- How COVID-19 caused a loosening of Opioid Rx restrictions and a corresponding impact on opioid dependency
- Pros and cons of current decision support tools that identify opioid dependency and the role of personalized AI-based tools

Thursday, April 22nd 11:00am–11:15am CT & 5:00pm–5:15pm CT

Strategies for Complying with Challenging Joint Commission Medication Management Standards

Jeannell M. Mansur, R.Ph, Pharm.D, FASHP, FSMSO, CJCP

Jeannell Mansur is Principal Consultant for Medication Management and Safety for Joint Commission Resources and Joint Commission International. In this role, she provides direction to hospital leaders on medication safety design, medication system optimization and technology implementation to support patient safety and effectiveness. Her expertise in lean six sigma and change acceleration performance improvement methods and tools is of immense value to organizations that are seeking to implement effective and sustainable improvement to challenging issues. Also in her role as Principal Consultant, Dr. Mansur provides expertise to the Joint Commission enterprise on medication system themes. Dr. Mansur has been recognized for her distinguished work by the designation of Fellow with the American Society of Health-System Pharmacists and the American Society for Medication Safety Officers. She is a voting member of the United States Pharmacopeial (USP) Convention.

Dr. Mansur completed training with the Institute for Healthcare Improvement in medication safety under the direction of Drs. Donald Berwick and Lucian Leape. The learning from these leaders and the experiences from this Institute resulted in the crafting of a systems-based approach to medication safety that has molded Dr. Mansur's philosophies.

Dr. Mansur has extensive experience in all aspects of medication system design and implementation as well as hospital pharmacy which includes clinical, operational and management responsibilities. She was Director of Pharmaceutical Services for 12 years at the University of Chicago Medical Center before she became Executive Director for Pharmacy Informatics, where she was involved in the planning, building and implementation of the organization's electronic medical record.

learning objectives

After attending this presentation, attendees will be able to:

- Describe changes in the Joint Commission medication standards and areas of focus for 2021
- Review trends in top challenging medication management (MM) standards and elements of performance
- Discuss strategies for implementing new allowances for complex orders
- Discuss top areas of focus for sterile compounding

Tips for Success!

Live! ONLINE reverseexpo

How to Prepare

- **Schedule your Virtual System Test.** If you have not done so already, contact us as soon as possible (615-449-6234) to schedule a meeting with our staff to ensure your system is ready for the Live Online! Reverse Expo.
- **Chrome is the ideal browser** for the Live Online! Reverse Expo platform.
- **Disconnect VPN.** Not doing so may prevent you from connecting to the Live Online! Reverse Expo platform.
- **Check WiFi Speed.** Streaming other devices during your virtual meetings may impact speed.
- **Check Microphone & Video Capability.** Use of headphones is suggested.
- **Check your Virtual Meeting Space.** Make sure you're satisfied with the lighting level, camera angle, and items that appear in the background when you're on camera.

Virtual Reverse Expo Day

- **Early = On Time.** Login to your Live Online! Reverse Expo dashboard 15 minutes in advance of each meeting to prevent any lost meeting time due to technical issues.
- **Focus on the Conversation.** Contact information will appear on the screen but don't worry about writing it down during your meeting—a summary email will be sent each day which will include contact information for all of your Live Online! Reverse Expo meetings.
- **Suppliers.** Bring your best "elevator pitch" and a warm smile. Share your product or service and allow time for the Provider to share their needs—you may be able to meet them in a way you did not initially anticipate.
- **Providers.** Be honest about whether each product or service will meet your needs; if you express interest to a Supplier during a meeting, be prepared for and please respond to follow up communication from them.

System Requirements

- **Desktop - Windows 10 & MacOS 10.7 Mojave**
4th gen Intel Core i3, 4GB Ram
 - Google Chrome (preferred)
 - Firefox
 - Microsoft Edge Chromium
 - Safari 11+
- **Mobile - Android 7.0**
 - Google Chrome
- **Mobile - iOS 12.2**
 - Safari 11+
- **Networking - Recommended**
 - Download 5.0 mb/s
 - Open TCP port 443
 - UDP port 3478
- **Networking - Minimum**
 - Download 1.2 mb/s
- **Open TCP port 443**
- **Speakers & Microphone - Built-in or USB**
- **Webcam - Built-in or USB**

Remember: Where you build your best relationships, you'll build your best business.

It's been an unprecedented time in health care and although COVID is still with us, hospitals are returning to a "new normal."

Regardless of a patient's healthcare needs, it is critical that reliable, safe medications are available.

We've been working to prepare for our shared "new normal" and SCA Pharma has increased capacity to meet demand and enhanced our On Demand Ordering portal to simplify ordering. You can easily:

- *Order desired quantities, concentration and delivery method*
- *Order product with extended BUDs*
- *Access select products available for immediate shipment*
- *Track your orders*

SCA Pharma is committed to meeting your needs regardless of the site of care. ED, Pre-op, Surgical suite, Post-Op or ICU, we can provide for your needs including opioid free alternatives.

SCA Pharma is here to help hospitals, pharmacies and surgical centers take care of patients.

COVID has been unpredictable. Treating patients doesn't have to be.

From PRE-OP
to PACU,
From ED to ICU,
We Deliver The
Critical Medicines
You Depend On.

To learn more visit us

THEN

90% of hospitals are still using outdated protocols from the 1960s for inpatient insulin titration.

It's Time We *Reimagine* Glycemic Management

NOW

Insulin titration in the hospital has changed.

Glytec

glytecsystems.com
ECO-01128-A

Glytec's eGlycemic Management System (eGMS) is FDA-cleared, EHR-integrated, cloud-based software solution that supports safe and effective glycemic management and insulin dosing.

THE DIFFERENCE IS MEDICATION MANAGEMENT THAT TAKES LESS MANAGEMENT

BD CAN HELP YOU GET YOUR TECHNOLOGIES ON THE SAME PAGE, AND YOUR TEAM DOING WHAT MATTERS MOST. At BD, we know medication management is incredibly complex. Aligning people, technologies and systems to get a single medication safely to a patient is daunting. But there's a better way, one that helps hospitals get all the players, parts and processes on the same page. At the heart of it is the BD HealthSight™ Platform, our integrated approach that connects our medication management solutions with each other—and with the EMR. The result? Improved efficiency and greater visibility across your enterprise, so you can get back to what matters most: your patients. Discover medication management that takes less management. **Discover BD.**

Gain new perspectives from industry innovators as they share organizational strategies and lessons learned from their medication management practices: bd.com/hcp21srx
